

CSE307:INTERNETWORKING ESSENTIALS

L:0 T:0 P:2 Credits:1

Course Outcomes: Through this course students should be able to

- CO1 :: understand the concept of internetworking devices and associated protocols
- CO2 :: perform the working of various commands for internetworking
- CO3 :: discuss routing protocol for static and dynamic routing using VLSM and FLSM
- CO4 :: analyze the practical utilization of server configuration
- CO5 :: explore the working of classfull and classless addressing scheme
- CO6 :: establish end to end connectivity using network utilities in a simulation environment

List of Practicals / Experiments:

Network hardware and IP addressing concept

- Working of hub, switch and Router, Adding of interfaces in devices
- Cabling - Creation of straight and Cross cable using crimping tool
- IP addressing basics, configuration using CLI, VLSM and FLSM on single router
- Implementation of Star, Mesh, Bus and Hybrid Topology

Network Commands

- Ping, tracer, arp, netstat, ipconfig, ftp, nslookup, snmpget, snmpgetbulk and snmpset (use DOS and scenario based configuration)

Network layer routing protocols

- Implementation of Static Routing using Classfull and classless (FLSM)
- Implementation of Static Routing using VLSM
- Routing information Protocol(RIP) using classfull and classless (FLSM)
- Routing information rotocol(RIP) using VLSM

Server Configuration and LAN Setup

- Implementation of FTP, Implementation of HTTP and Email setup on server
- Implementation of DNS, Implementation of DHCP
- Implementation of LAN with configuration of inter-networking devices and any application layer protocol

IPv6 addressing and routing

- IPv6 Addressing & Stateless Address Auto Configuration (SLAAC)
- IPv6 Neighbor Discovery
- IPv6 Static Routing
- IPv6 Dynamic Routing

Text Books: 1. COMPUTER NETWORKS by ANDREW S. TANENBAUM, PEARSON
